

# **CHAPTER –1**

## **NORMALIZATION**

- **It is the process of creating an efficient database system from a denormalized dataset to reduce redundancy and perform analysis using SQL queries.**

### **1.1. Original Columns:**

- First Name
- Middle Name
- Last Name
- Candidate Source category name
- Job Posting title
- Total Experience
- City

### **1.2. 3NF Schema:**

#### **Table 1: Candidates**

- CandidateID (Primary Key)
- FirstName
- MiddleName
- LastName
- ExperienceID (Foreign Key referencing Experience table)

#### **Table 2: Experiences**

- ExperienceID (Primary Key)
- Position
- Years
- SourceOfApplication
- City

## CHAPTER-2

### 2.1. PREPROCESSING DATASET

#### 2.1.1. Replacing the unnecessary symbol '-' from column [Experience].

\* A simple find and replace option within the section used to do so.  
“Minus sign is replaced using a space”.

**Find and Replace**

### 2.1.3. Converting years and months from column [Experience] to numeric 'year' value.

--> This is done to perform a better analysis over the experience column as it will be a numeric variable.

#### Benefits:

statistical analysis, visualization, modeling compatibility, correlation exploration, feature engineering possibilities, time series analysis, support for machine learning models, and streamlined data preprocessing.

#### Formulas used:

- **For extracting years:** = IFERROR (VALUE (LEFT (F2, SEARCH (" years", F2) - 1)), 0)
- **For extracting months:** = IFERROR (VALUE (MID (F2, SEARCH (" years", F2) + 6, SEARCH (" months", F2) - SEARCH (" years", F2) - 7)), 0)
- **For total years:** =G2 + H2 / 12

Fig:1

## CHAPTER – 3

### CREATING NORMALIZED DATABASE SYSTEM USING MYSQLWORKBENCH

**3.1. Create different excel sheets from existing Sheet using 3-NF form as described in chapter 1.**

- **Step 1: Add an extra column “candidate\_id” which will be used as a Primary key in MySql in Candidate.excel sheet.**

G14						
	A	B	C	D	E	F
1		Experience	Candidate	First name	Middle name	Last name
2		1	1	Sujit	Kumar	Ojha
3		2	2	Preeti		Binoy
4		3	3	Harshad	Ratho	Sureshchandra
5		4	4	AAYUSHI		SHAH
6		5	5	Rakhi		Dashore
7		6	6	Gurneet		kaur
8		7	7	Vasvi		Patel
9		8	8	Aishani	B.	Tripathi
10		9	9	Akshay	Sonia	Parihar
11		10	10	DEMINA		CHOVATIA
12		11	11	DILIP	K	SELANI (SHAH
13		12	12	KALYAN		KUMAR
14		13	13	Jagruti		Jain
15		14	14	Mhemuda	A	Shaikh
16		15	15	Mohini		Radia
17		16	16	THAKKAR	HIMAN	HEMANTBHAI

24	23	Portal	Social Media Executive (Remote)	6.17	Mumbai
25	24	Portal	Social Media Executive (Remote)	0.67	Ahmedabad

- **Step 3: Copy the column “Experience\_key” from Experience.excel sheet to Candidate.excel sheet that we ceated as we will use it as a reference to Experience table.**

## 3.2. LOAD DATASET TO MYSQL WORK ENVIRONMENT

- **STEP 1: Create a new Schema in MYSQL server**

- **STEP 2: Import table data using import table data wizard**

File Edit View Query Database Server Tools Scripting Help

Navigator: Query 1 candidatee - Table experience - Table new\_schema - Schema x SQLAd

SCHEM Table Data Import

Configure Import Settings

Detected file format: csv

Encoding: utf-8

Columns:

Source Column	Field Type
<input checked="" type="checkbox"/> MyUnknownColumn	text
<input checked="" type="checkbox"/> Experience_key	int
<input checked="" type="checkbox"/> Candidate_id	int
<input checked="" type="checkbox"/> First name	text
<input checked="" type="checkbox"/> Middle name	text
<input checked="" type="checkbox"/> Last name	text

MyUnknown...	Experience...	Candidate_id	First name	Middle name	Last name
1	1	1	Sujit	Kumar	Ojha
2	2	2	Preeti		Binoy
3	3	3	Harshad	Ratho	Sureshchan...
4	4	4	AAYUSHI		SHAH
5	5	5	Rakhi		Dashore

< Back Next > Cancel

### STEP 3: DEFINE THE STRUCTURE OF TABLE

- **Candidate\_id** as primary key in **Candidate** table
- **Experience\_key** as Foreign key in **Candidate** table
- **Experience\_key** as Primary key in **Experience** table

The screenshot shows a database management interface with the 'Candidate' table selected in the 'appitsimple' schema. The table structure is defined as follows:

Column Name	Datatype	PK	NN	UQ	B	UN	ZF	AI	G
Experience_key	INT	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Candidate_id	INT	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Firstname	TEXT	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Middlename	TEXT	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Below the table structure, there are fields for defining a new column:

Column Name:  Data Type:   
Charset/Collation:  Expression:   
Comments:

Storage options:

☐ Virtual ☐ Stored  
☐ Primary Key ☐ Not Null ☐ Unique  
☐ Binary ☐ Unsigned ☐ Zero Fill  
☐ Auto Increment ☒ Generated

At the bottom, there are tabs for 'Columns', 'Indexes', 'Foreign Keys', 'Triggers', 'Partitioning', and 'Options'. The 'Columns' tab is currently selected.

## CHAPTER – 4

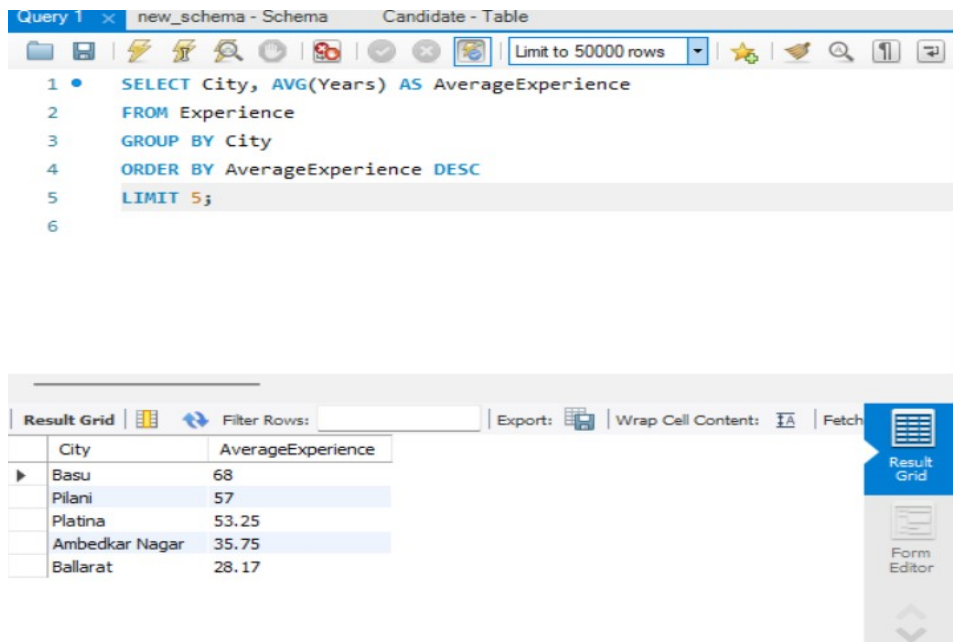

### 4.1. PERFORMING QUERIES FOR ANALYSIS & GETTING INSIGHTS

1. Find the top 5 cities with the highest average experience.

**Query:**

```
SELECT City, AVG(Years) AS AverageExperience
FROM Experience
GROUP BY City
ORDER BY AverageExperience DESC
LIMIT 5;
```

**Ans:**

The screenshot shows a database query editor interface. The top toolbar includes icons for file operations, query execution, and a dropdown menu set to "Limit to 50000 rows". The SQL query is displayed in the editor area, and the results are shown in a table below.

**Query 1** | new\_schema - Schema | Candidate - Table

Limit to 50000 rows

```
1 • SELECT City, AVG(Years) AS AverageExperience
2 FROM Experience
3 GROUP BY City
4 ORDER BY AverageExperience DESC
5 LIMIT 5;
6
```

**Result Grid** | Filter Rows: | Export: | Wrap Cell Content: | Fetch

	City	AverageExperience
▶	Basu	68
	Pilani	57
	Platina	53.25
	Ambedkar Nagar	35.75
	Ballarat	28.17

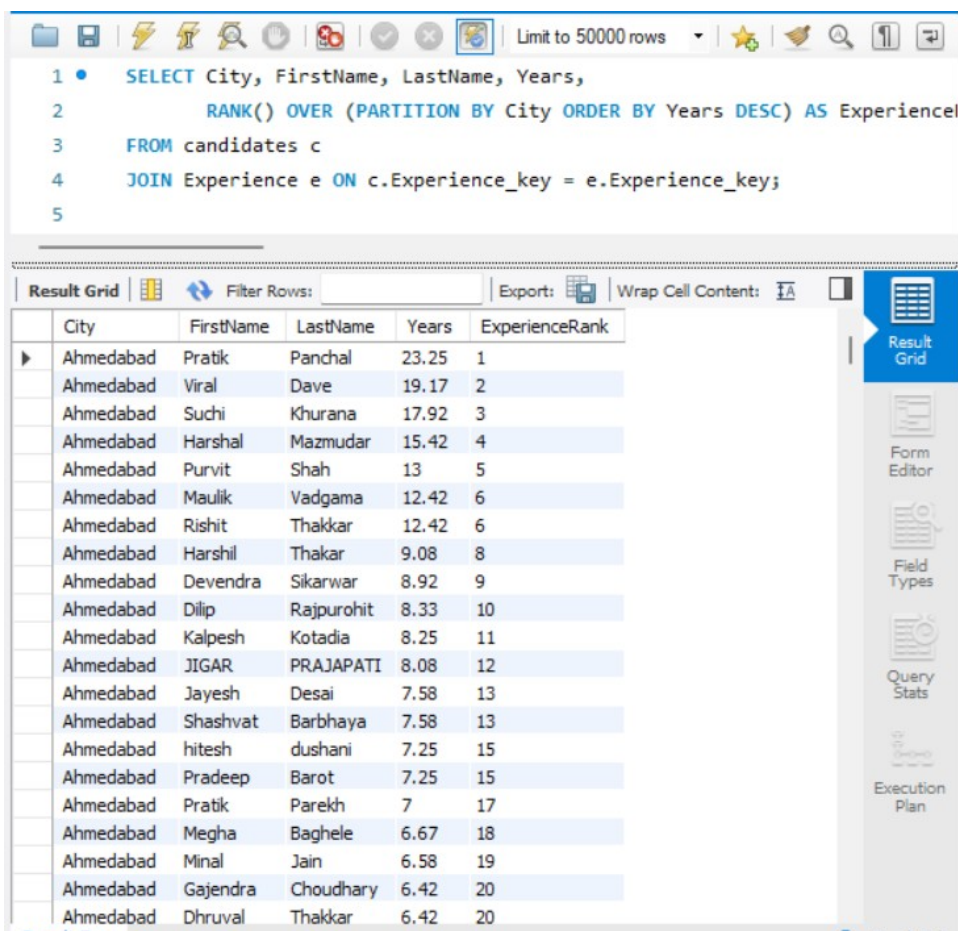

**Result Grid**  
Form Editor

## 2. Rank Candidates based on their Experiences within each city .

### Query:

```
SELECT City, FirstName, LastName, Years,  
       RANK() OVER (PARTITION BY City ORDER BY Years DESC) AS ExperienceRank  
FROM Candidates c  
JOIN Experience e ON c.Experience_key = e.Experience_key;
```

### Ans:

The screenshot shows a database query editor with a toolbar at the top. The query is as follows:

```
1 • SELECT City, FirstName, LastName, Years,  
2       RANK() OVER (PARTITION BY City ORDER BY Years DESC) AS ExperienceRank  
3 FROM candidates c  
4 JOIN Experience e ON c.Experience_key = e.Experience_key;  
5
```

Below the query editor, the 'Result Grid' is displayed, showing the results of the query. The grid has columns for City, FirstName, LastName, Years, and ExperienceRank. The results are sorted by City (Ahmedabad) and then by Years in descending order.

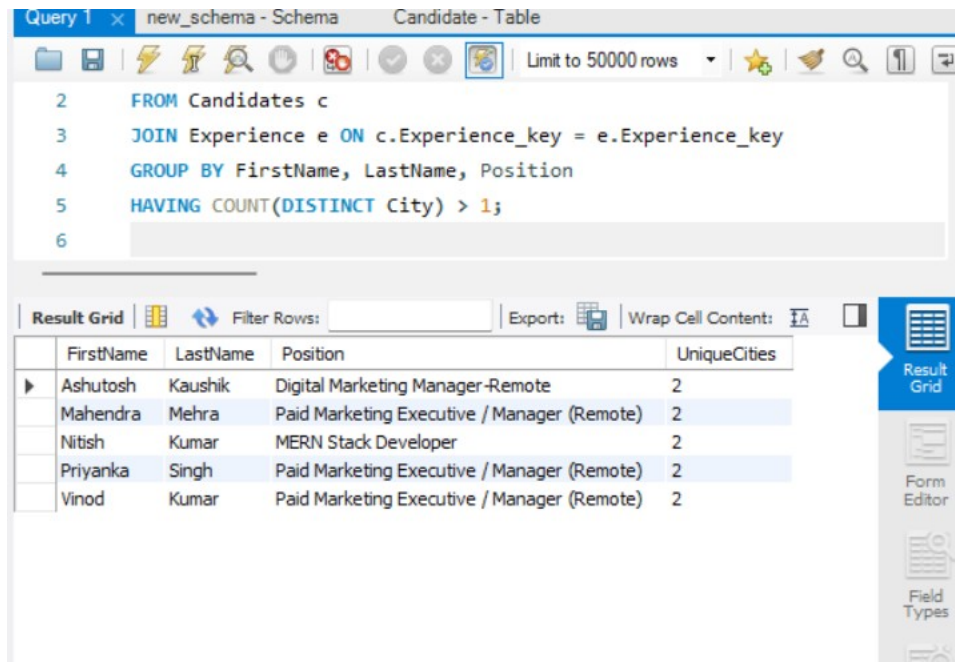

City	FirstName	LastName	Years	ExperienceRank
Ahmedabad	Pratik	Panchal	23.25	1
Ahmedabad	Viral	Dave	19.17	2
Ahmedabad	Suchi	Khurana	17.92	3
Ahmedabad	Harshal	Mazmudar	15.42	4
Ahmedabad	Purvit	Shah	13	5
Ahmedabad	Maulik	Vadgama	12.42	6
Ahmedabad	Rishit	Thakkar	12.42	6
Ahmedabad	Harshil	Thakar	9.08	8
Ahmedabad	Devendra	Sikarwar	8.92	9
Ahmedabad	Dilip	Rajpurohit	8.33	10
Ahmedabad	Kalpesh	Kotadia	8.25	11
Ahmedabad	JIGAR	PRAJAPATI	8.08	12
Ahmedabad	Jayesh	Desai	7.58	13
Ahmedabad	Shashvat	Barbhaya	7.58	13
Ahmedabad	hitesh	dushani	7.25	15
Ahmedabad	Pradeep	Barot	7.25	15
Ahmedabad	Pratik	Parekh	7	17
Ahmedabad	Megha	Baghele	6.67	18
Ahmedabad	Minal	Jain	6.58	19
Ahmedabad	Gajendra	Choudhary	6.42	20
Ahmedabad	Dhruval	Thakkar	6.42	20

### 3. Find the name of Candidates who applied for same position from different city.

#### Query:

```
SELECT FirstName, LastName, Position, COUNT(DISTINCT City) AS UniqueCities
FROM Candidates c
JOIN Experience e ON c.Experience_key = e.Experience_key
GROUP BY FirstName, LastName, Position
HAVING COUNT(DISTINCT City) > 1;
```

#### Ans:

The screenshot shows a database query editor window titled 'Query 1' with a schema named 'new\_schema' and a table named 'Candidate'. The SQL query is as follows:

```
2 FROM Candidates c
3 JOIN Experience e ON c.Experience_key = e.Experience_key
4 GROUP BY FirstName, LastName, Position
5 HAVING COUNT(DISTINCT City) > 1;
```

The results are displayed in a grid with the following columns: FirstName, LastName, Position, and UniqueCities. The results show five candidates, each with a UniqueCities value of 2.

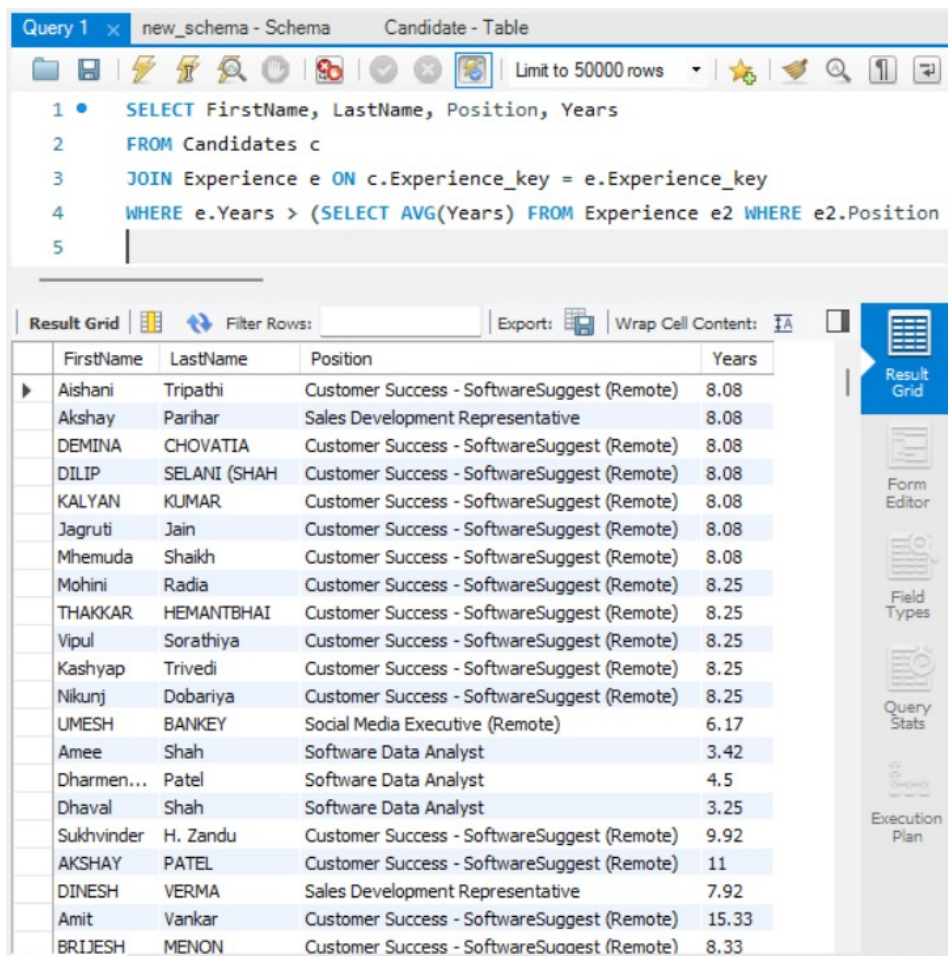

FirstName	LastName	Position	UniqueCities
Ashutosh	Kaushik	Digital Marketing Manager-Remote	2
Mahendra	Mehra	Paid Marketing Executive / Manager (Remote)	2
Nitish	Kumar	MERN Stack Developer	2
Priyanka	Singh	Paid Marketing Executive / Manager (Remote)	2
Vinod	Kumar	Paid Marketing Executive / Manager (Remote)	2

#### 4. Find Candidates who have experience greater than the average experience of candidates applied for same position.

##### Query:

```
SELECT FirstName, LastName, Position, Years
FROM Candidates c
JOIN Experience e ON c.Experience_key = e.Experience_key
WHERE e.Years > (SELECT AVG(Years) FROM Experience e2 WHERE e2.Position =
e.Position);
```

##### Ans:

The screenshot shows a database query editor with the following SQL query:

```
1 SELECT FirstName, LastName, Position, Years
2 FROM Candidates c
3 JOIN Experience e ON c.Experience_key = e.Experience_key
4 WHERE e.Years > (SELECT AVG(Years) FROM Experience e2 WHERE e2.Position =
5 e.Position);
```

The results are displayed in a grid with the following columns: FirstName, LastName, Position, and Years. The data is as follows:

FirstName	LastName	Position	Years
Aishani	Tripathi	Customer Success - SoftwareSuggest (Remote)	8.08
Akshay	Parihar	Sales Development Representative	8.08
DEMINA	CHOVATIA	Customer Success - SoftwareSuggest (Remote)	8.08
DILIP	SELANI (SHAH	Customer Success - SoftwareSuggest (Remote)	8.08
KALYAN	KUMAR	Customer Success - SoftwareSuggest (Remote)	8.08
Jagruti	Jain	Customer Success - SoftwareSuggest (Remote)	8.08
Mhemuda	Shaikh	Customer Success - SoftwareSuggest (Remote)	8.08
Mohini	Radia	Customer Success - SoftwareSuggest (Remote)	8.25
THAKKAR	HEMANTBHAI	Customer Success - SoftwareSuggest (Remote)	8.25
Vipul	Sorathiya	Customer Success - SoftwareSuggest (Remote)	8.25
Kashyap	Trivedi	Customer Success - SoftwareSuggest (Remote)	8.25
Nikunj	Dobariya	Customer Success - SoftwareSuggest (Remote)	8.25
UMESH	BANKEY	Social Media Executive (Remote)	6.17
Amee	Shah	Software Data Analyst	3.42
Dharmen...	Patel	Software Data Analyst	4.5
Dhaval	Shah	Software Data Analyst	3.25
Sukhvinder	H. Zandu	Customer Success - SoftwareSuggest (Remote)	9.92
AKSHAY	PATEL	Customer Success - SoftwareSuggest (Remote)	11
DINESH	VERMA	Sales Development Representative	7.92
Amit	Vankar	Customer Success - SoftwareSuggest (Remote)	15.33
BRIJESH	MENON	Customer Success - SoftwareSuggest (Remote)	8.33

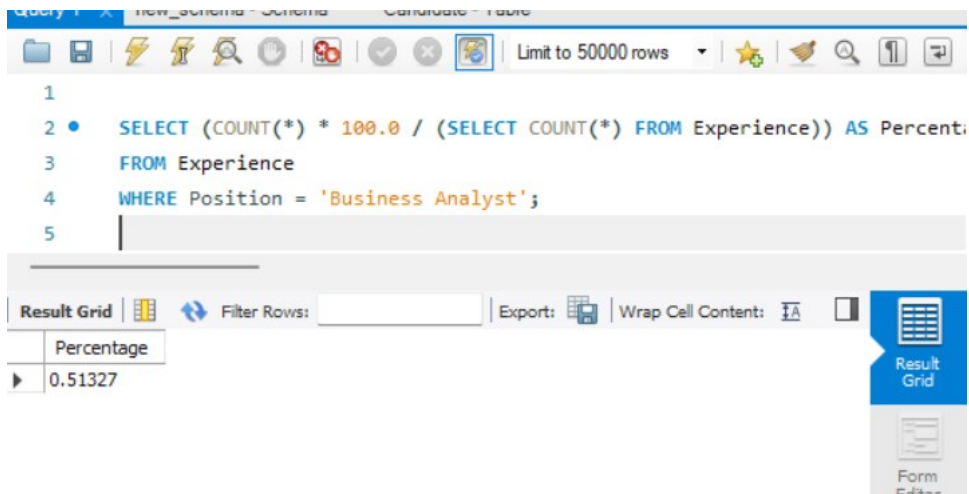

**5. Calculate the overall percentage of the Candidates applied for “Business Analyst”.**

**Query:**

```
SELECT (COUNT(*) * 100.0 / (SELECT COUNT(*) FROM Experience)) AS Percentage  
FROM Experience  
WHERE Position = 'Business Analyst'
```

**Ans:**

The screenshot shows a SQL query editor with the following query:

```
1  
2 • SELECT (COUNT(*) * 100.0 / (SELECT COUNT(*) FROM Experience)) AS Percent:  
3 FROM Experience  
4 WHERE Position = 'Business Analyst';  
5
```

Below the query editor, the result grid is displayed with the following data:

Percentage
0.51327

The interface includes a toolbar with various icons, a "Limit to 50000 rows" dropdown, and buttons for "Result Grid" and "Form Editor".

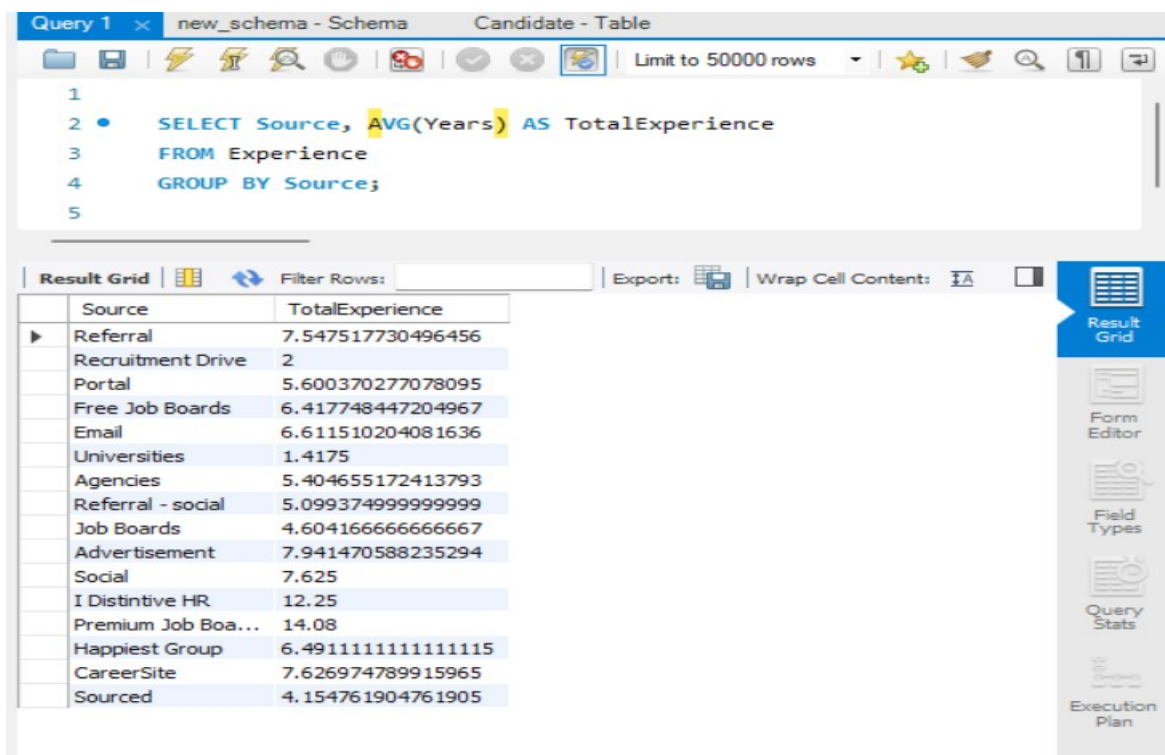

## 6. Calculate average experience of candidates who applied from each source.

### Query:

```
SELECT Source, AVG(Years) AS TotalExperience
FROM Experience
GROUP BY Source;
```

### Ans:

The screenshot shows a database query tool interface. The top pane displays the SQL query: `SELECT Source, AVG(Years) AS TotalExperience FROM Experience GROUP BY Source;`. The bottom pane shows the results in a grid format with two columns: Source and TotalExperience. The results are as follows:

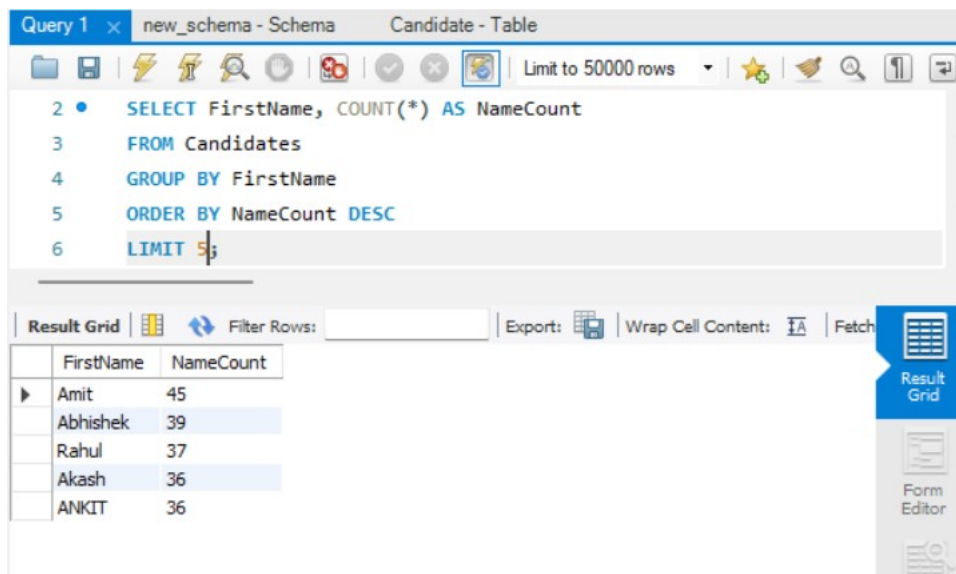

Source	TotalExperience
Referral	7.547517730496456
Recruitment Drive	2
Portal	5.600370277078095
Free Job Boards	6.417748447204967

Job Boards	4.604166666666667
Advertisement	7.941470588235294
Social	7.625
I Distintive HR	12.25
Premium Job Boa...	14.08
Happiest Group	6.491111111111115
CareerSite	7.626974789915965
Sourced	4.154761904761905

## 7. Candidates with most Common first name

### Query:

```
SELECT FirstName, COUNT(*) AS NameCount
FROM Candidates
GROUP BY FirstName
ORDER BY NameCount DESC
LIMIT 5;
```

### Ans:

The screenshot shows a database query editor interface. The top bar indicates the current context is 'new\_schema - Schema' and the selected table is 'Candidate - Table'. The query editor displays the following SQL query:

```
2 • SELECT FirstName, COUNT(*) AS NameCount
3 FROM Candidates
4 GROUP BY FirstName
5 ORDER BY NameCount DESC
6 LIMIT 5;
```

Below the query editor, the 'Result Grid' tab is active, showing the results of the query. The results are displayed in a table with two columns: 'FirstName' and 'NameCount'.

FirstName	NameCount
Amit	45
Abhishek	39
Rahul	37
Akash	36
ANKIT	36

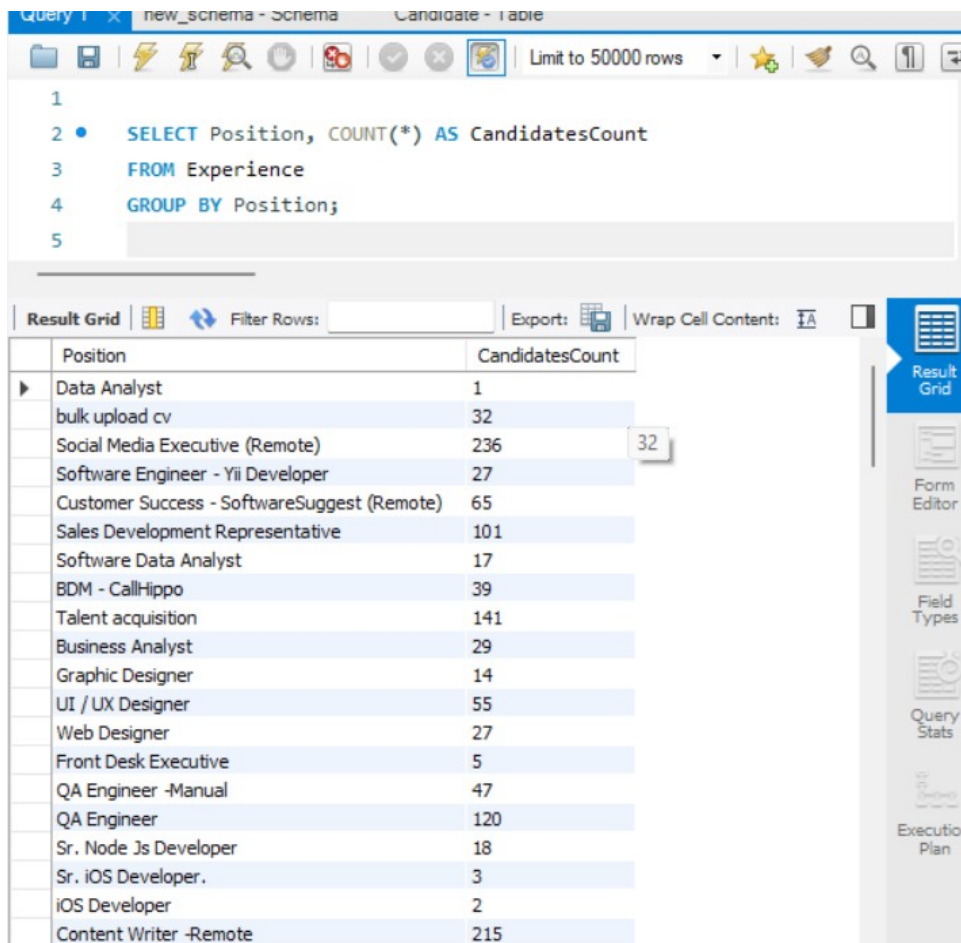

The interface also includes a toolbar with various icons for query execution, a 'Limit to 50000 rows' dropdown, and buttons for 'Export', 'Wrap Cell Content', and 'Fetch'. A sidebar on the right contains a 'Result Grid' button and a 'Form Editor' button.

## 8. Get count of candidates for each job position

### Query:

```
SELECT Position, COUNT(*) AS CandidatesCount
FROM Experience
GROUP BY Position;
```

### Ans:

The screenshot shows a database query tool interface. The top toolbar includes icons for file operations, query execution, and a 'Limit to 50000 rows' dropdown. The SQL editor contains the following query:

```
1
2 • SELECT Position, COUNT(*) AS CandidatesCount
3 FROM Experience
4 GROUP BY Position;
5
```

Below the editor, the 'Result Grid' tab is active, displaying the query results in a table. The table has two columns: 'Position' and 'CandidatesCount'. The results are as follows:

Position	CandidatesCount
Data Analyst	1
bulk upload cv	32
Social Media Executive (Remote)	236
Software Engineer - Yii Developer	27
Customer Success - SoftwareSuggest (Remote)	65
Sales Development Representative	101
Software Data Analyst	17
BDM - CallHippo	39
Talent acquisition	141
Business Analyst	29
Graphic Designer	14
UI / UX Designer	55
Web Designer	27
Front Desk Executive	5
QA Engineer -Manual	47
QA Engineer	120
Sr. Node Js Developer	18
Sr. iOS Developer.	3
iOS Developer	2
Content Writer -Remote	215

On the right side of the interface, there is a vertical toolbar with icons for 'Result Grid', 'Form Editor', 'Field Types', 'Query Stats', and 'Execution Plan'.

**THERE ARE SEVERAL MORE QUESTIONS CAN BE ANSWERED USING THIS EFFICIENT DATABASE SYSTEM CREATED.**

- **BENIFITS OF THIS NORMALIZED DATABASE:**

- 1. FUTURE RECORD CAN BE EASILY ADDED INTO THIS WITHOUT HAVING INSERTION ANAMOLIES**
- 2. DELETION OF A CERTAIN RECORD WON'T AFFECT ANY OTHER RECORDS**
- 3. SCALABLE: IT CAN GROW EASILY AS THE COMPANY GROWS.**

#### **4.2. LIST OF FEW QUESTIONS THAT CAN BE ANSWERED:**

1. Retrieve all columns for all candidates in the dataset.
2. Determine the total number of candidates in the dataset.
3. Retrieve a list of distinct cities where candidates are located.
4. Count the number of candidates for each source of application.
5. Calculate the average experience (in years) for candidates in each city.
6. Calculate the total experience (sum of experience) for each job position.
7. If applicable, join the dataset with another table containing additional information (e.g., outcomes, feedback).
8. Identify candidates with experience higher than the average experience in their city.
9. Count the number of candidates for each combination of source and job position.

### 4.3. SUGGESTIONS:

#### 1. Hiring Based on ranking:

- Recruitment board should consider the rankings of the candidates as given in Question no.2 & Question no.4 above, to shortlist Candidates to cut off hiring expenses

#### 2. Optimizing Recruitment Sources:

- Allocate more resources to the Source of Application: 'Free Job Boards', 'Distinctive HR' and 'Advertisements' as they have the highest qualified candidates.

#### 3. Geographical Focus:

- Target Cities: Bangalore, Mumbai & New Delhi as they constitute the candidates with the highest average Experience.

#### 4. Name Analysis:

- Amit is the most common name still these days
- Singh as a surname is most common

#### 5. Data Quality Improvement:

- Add the Outcome data of hiring status as Hired or Rejected, as it limits the ability to perform certain analyses related to recruitment success, effectiveness of the hiring process, and factors influencing hiring decisions.

#### **4.3. LIMITATION OF DATASET:**

##### **1. Limited Variable:**

The Dataset doesn't include additional details such as education, skills, specific project experience, or outcomes (e.g., whether a candidate was hired or not), which could provide a more comprehensive view.

##### **2. Outcome Information (Hired or Not Hired):**

The absence of information on whether candidates were hired or not limits the ability to analyze the effectiveness of the recruitment process or factors influencing hiring decisions.

##### **3. Lack of Time component:**

It makes the data challenging to analyze trends over time or changes in candidate behavior or characteristics.
